Re: Opengear hardware products and software from Kaspersky Labs

Opengear's current and previous generations of hardware products (ACM5000, ACM5500, ACM7000, CM4100, CM7100, IM4200 and IM7200 families) do not contain any technology created by Kaspersky Labs. We do not offer the ability to install third party software, including that from Kaspersky Labs, and none of the existing Kaspersky products are compatible with the embedded environment on our hardware products.

A handwritten signature in blue ink, appearing to read 'R. Stevenson', with a long horizontal flourish extending to the right.

Rick Stevenson  
COO, Opengear, Inc.
